Subject: Prospective M.S. Student — Multimodal Learning for Medical Imaging — CMU MSAII

Attachments: LiXue_CV.pdf; LiXue_Transcript.pdf

Dear Prof. Smith,

My name is Li Xue, a Computer Science undergraduate at Peking University preparing an application to Carnegie Mellon University's M.S. in Artificial Intelligence and Innovation. I am writing because your recent work on robust multimodal alignment closely relates to a problem I encountered in medical image analysis.

In a national undergraduate innovation project, I designed core experiments for a deep-learning medical image analysis system and explored how contrastive learning and cross-modal attention can improve alignment when annotated samples are limited. During an NLP internship at Baidu AI Lab, my work helped raise intent-classification accuracy from 91.2% to 94.6%. I also placed in the top 5% of a Kaggle multimodal classification challenge. With a GPA of 3.8/4.0, a GRE score of 330, and two co-authored papers, I have developed a solid foundation for further research.

I would appreciate the opportunity to ask whether my background could fit your group's upcoming projects. Would you be available for a brief 15–30 minute Zoom conversation? My CV and transcript are attached for reference.

Best regards,
Li Xue

Before sending: replace “Prof. Smith,” the email addresses, and the research reference with verified details. Keep the email body between 150 and 200 English words and confirm that the attachment names match the actual files.
